LIBBARY

PREFACE

PRÉFACE

"Dimensions" is a data series designed to provide information on selected topics for which considerable interest has been expressed. The series consists of seven publications each with varying data presentation and geographic coverage.

Three publications present profiles of selected populations. These are:

Profile of Ethnic Groups (Cat. No. 93-154), Canada only

Profile of the Immigrant Population (Cat. No. 93-155), Canada, provinces and territories

Canadians and Their Occupations - A Profile (Cat. No. 93-157), Canada only

The other four publications present more detailed information or cross-tabulations. These are:

Occupational Trends, 1961-1986 (Cat. No. 93-151), Canada, provinces and territories

Industry Trends, 1951-1986 (Cat. No. 93-152), Canada, provinces and territories

Language Retention and Transfer (Cat. No. 93-153), Canada, provinces, territories, Montréal and Ottawa-Hull census metropolitan areas

Census Metropolitan Areas (Cat. No. 93-156), the 25 census metropolitan areas

In addition to "Dimensions", there are two other data series. The "Profiles" series provides a statistical overview of a particular subprovincial area (e.g., municipality) touching on a wide selection of census variables but providing a limited amount of detail. "The Nation" is a data series designed to illustrate the scope and depth of the 1986 Census subject-matter by presenting considerable detail on variables, cross-tabulating variables, or providing historical data.

"Dimensions" est une série de données destinées à fournir des renseignements sur certains sujets qui ont suscité un intérêt considérable. La série comprend sept publications dont chacune présente différentes données et couvre différentes régions.

Des profils de certaines populations sont présentés dans les trois publications suivantes:

Profil des groupes ethniques (nº 93-154 au catalogue), Canada seulement

Profil de la population immigrante (nº 93-155 au catalogue), Canada, provinces et territoires

Les Canadiens et leurs professions: Un profil (nº 93-157 au catalogue), Canada seulement

Les quatre autres publications donnent de plus amples renseignements ou présentent des tableaux croisés. Elles sont:

Tendances au niveau de la profession, 1961-1986 (nº 93-151 au catalogue), Canada, provinces et territoires

Tendances au niveau de l'industrie,1951-1986 (nº 93-152 au catalogue), Canada, provinces et territoires

Rétention et transfert linguistiques (nº 93-153 au catalogue), Canada, provinces, territoires et régions métropolitaines de recensement de Montréal et d'Ottawa-Hull

Régions métropolitaines de recensement (nº 93-156 au catalogue), les 25 régions métropolitaines de recensement

En plus de la série "Dimensions", on prévoit publier deux autres séries. La série des "Profils" donne un aperçu statistique d'une région géographique donnée (par exemple, une municipalité) en utilisant une vaste gamme de variables du recensement, mais avec un niveau de détail limité. "Le Pays" est une série de données destinées à illustrer l'étendue et l'ampleur des sujets du recensement de 1986 en affichant un niveau de détail considérable sur les variables ou les croisements de variables et en fournissant des données chronologiques.

HIGHLIGHTS

FAITS SAILLANTS

LANGUAGE RETENTION AND TRANSFER

To better reflect the linguistic reality in Canada, the 1986 Census was the first in which Canadians were allowed to provide more than one language to the mother tongue and home language questions. Consequently, considerable care must be exercised in the interpretation of changes observed between 1981 and 1986.

The 1986 adjusted language data (for more information, see page xxiii) show that language transfers contribute to the growth of the English language population in Canada. While 62.1% of the population reported English as the language they first learned in childhood and still understood at the time of the census (mother tongue), 68.9% reported that they spoke English most often at home. It should be noted, however, that transfers do not necessarily mean that the mother tongue has been abandoned. It may be spoken in the home, while another language is used more often to communicate. It may also be used in other contexts, such as work.

Even in Quebec, more people spoke English most often in their home (12.3%) than learned this language as their mother tongue (10.4%). Most of the population in this province, who first learned a language other than English or French as mother tongue and who made a language shift, adopted English as their dominant home language. A more comprehensive analysis is required to determine whether this tendency to adopt English has changed between 1981 and 1986.

On balance, the French-speaking community in Quebec neither gained nor lost population through language shifts. The same proportion of the population - 82.8% - learned French as their mother tongue and spoke it most often at home. Outside Quebec however, 5.0% had French as

RÉTENTION ET TRANSFERT LINGUISTIQUES

Afin de mieux rendre compte de la réalité linguistique au Canada, les Canadiens étaient autorisés, pour la première fois en 1986, à indiquer plus d'une langue en réponse aux questions sur la langue matierenlel et la langue parlée à la maison. Par conséquent, il faut être très prudent dans l'interprétation des variations observées entre 1981 et 1986.

Les données linguistiques ajustées de 1986 (pour de plus amples renseignements, voir la page xxxviii) révèlent que les transferts linguistiques ont contribué à la croissance de la population d'expression anglaise au Canada. Tandis que 62.1% de la population déclarait avoir appris l'anglais en premier lieu dans son enfance et toujours le comprendre au moment du recensement (langue maternelle), 68.9% de la population déclarait parler l'anglais le plus souvent à la maison. On notera toutefois que de tels transferts n'impliquent pas nécessairement un abandon de la langue maternelle. Elle peut être parlée à la maison, alors qu'une autre langue y est utilisée plus souvent pour communiquer. Elle peut aussi être utilisée dans d'autres contextes, notamment au travail

Même au Québec, la proportion de personnes parlant l'anglais le plus souvent à la maison (12.3%) était plus élevée que la proportion de la population y étant de langue maternelle anglaise (10.4%). La majorité des personnes de cette province ayant une langue maternelle autre que le français ou l'anglais et ayant fait un transfert linguistique choisissaient de parler l'anglais comme principale langue à la maison. Une analyse plus détaillée des résultats du recensement de 1986 est toutefois nécessaire pour déterminer si cette tendance à choisir l'anglais a varié entre 1981 et 1986.

La population de langue française du Québec n'a, somme toute, ni gagné ni perdu de membres par les transferts linguistiques. Les Québécois de langue maternelle française et ceux dont le français était la langue parlée le plus souvent à la maison représentaient le même pourcentage de la their mother tongue, but only 3.6% reported speaking French most often in their home. These language shifts were most common in the western provinces and less prevalent in New Brunswick. In Saskatchewan, while 2.3% reported French as mother tongue, less than 1.0% reported French as home language. In New Brunswick, 33.5% reported this language as mother tongue and 31.3% as home language. The largest number of francophones outside Quebec live in Ontario. In this province, 5.3% of the population reported French as mother tongue and 3.8% French as home language.

Language shifts also influence the size of other language groups. While 12.8% of the Canadian population reported languages other than English or French as mother tongue, only 7.0% indicated speaking these languages most often at home.

population (82.8%). Hors Québec, cependant, 5.0% de la population était de langue maternelle française, mais seulement 3.6% déclarait parler le français le plus souvent à la maison. Ces transferts linguistiques étaient plus répandus dans les provinces de l'Ouest et moins fréquents au Nouveau-Brunswick, En Saskatchewan, alors que 2.3% de la population était de langue maternelle française, moins de 1.0% parlait le français à la maison. Au Nouveau-Brunswick, 33.5% de la population indiquait le français comme langue maternelle et 31.3% comme langue parlée à la maison. Hors Québec, c'est en Ontario qu'on retrouve le plus grand nombre de francophones. Dans cette province, 5.3% de la population déclarait le français comme langue maternelle et 3.8% comme langue utilisée le plus souvent à la maison.

Les transferts linguistiques déterminent aussi la taille des autres groupes linguistiques. Alors que 12.8% de la population canadienne déclarait une autre langue maternelle que l'anglais et le français, seulement 7.0% indiquait parler ces langues le plus souvent à la maison.

GUIDELINES FOR USING THIS PUBLICATION

PURPOSE

For some Canadians, the language they speak most often at home differs from the language they first learned in childhood (mother tongue). These language transfers - also referred to as language shifts - are a major factor in determining the mother tongue of the following generation. This publication provides data on language retention and transfer from the 1986 Census. It also includes selected figures from the 1981 Census. Data are provided for Canada, the provinces and the territories, along with selected census metropolitan areas.

ORGANIZATION OF THE PUBLICATION

This publication contains four tables. The basic table used to study language transfers - a crosstabulation of mother tongue and home language data - is provided in Table 1, both for 1986 and 1981. The three subsequent tabulations add one dimension to the core table: either age, the ability to speak Canada's official languages or ethnic origin. They show 1986 data only.

TABLE DESCRIPTIONS

The 1986 Census was the first in which Canadians were allowed to report more than one mother tongue or more than one home language. Consequently, the tabulations presented here comprise "multiple responses". Additional information on this topic may be found in the special note on language data, on page xxiii.

Table 1 is a cross-tabulation of mother tongue and home language data. Each variable is broken down into eight categories, that is, English, French, all other languages rolled up into one group, and five categories that summarize the multiple responses.

Table 2 adds information about the age structure of the population.

LIGNES DIRECTRICES POUR L'UTILISATION DE CETTE PUBLICATION

RUT

Pour certains Canadiens, la langue parlée le plus souvent à la maison diffère de celle qu'ils ont d'abord apprise dans l'enfance (langue maternelle). Ces transferts linguistiques ont une influence déterminante sur la langue maternelle de la génération suivante. La présente publication renferme des données du recensement de 1986 sur la rétention et le transfert linguistiques. Elle comprend également certains chiffres du recensement de 1981. Les données sont fournies pour le Canada, les provinces, les territoires et certaines régions métropolitaines de recensement.

ORGANISATION DE LA_ PUBLICATION

La présente publication contient quatre tableaux. Le tableau de base utilisé dans l'étude des transferts linguistiques - qui croise les données sur la langue maternelle et la langue parlée à la maison - figure au tableau 1, pour 1986 et 1981. Les trois totalisations suivantes ajoutent une dimension au tableau principal, soit l'âge, la capacité de parler les langues officielles du Canada, ou l'origine ethnique, et renferment les données de 1986 seulement.

DESCRIPTION DES TABLEAUX

Pour la première fois au recensement de 1986, une personne pouvait indiquer plus d'une langue maternelle ou plus d'une langue parlée à la maison. Par conséquent, les totalisations de la présente publication comprennent des "réponses multiples". La note spéciale sur les données linguistiques, à la page xxxviii, fournit de plus amples renseignements à ce sujet.

Le tableau I se veut un tableau croisé des données sur la langue maternelle et la langue parlée à la maison. Chaque variable comporte huit catégories, soit l'anglais, le français, toutes les autres langues combinées en un groupe et cinq catégories qui résument les réponses multiples.

Le tableau 2 donne des renseignements sur la structure par âge de la population.

Table 3 is a cross-classification of the three language questions asked in the census, that is, mother tongue, home language and official language.

Table 4 adds information on the ethnic origin of respondents. The latter is broken down into five categories, that is, British, French, all the other origins rolled up into one group, and two categories of multiple responses: British and French and other multiple responses.

All data in this publication are cross-classified by sex.

GEOGRAPHIC AND CONTENT CONSIDERATIONS

Count discrepancies between 100% data and 20% sample data: Counts of the population, households, dwellings or families shown in tabulations based on a 20% sample may differ from those collected on a 100% basis for the following reasons:

- (1) The exclusion of institutional residents: Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as homes for the elderly, hospitals and correctional institutions. Detailed sample data were not collected from this sector of the population.
- (2) Weighting: Data collected on a sample basis were weighted up to provide estimates of the entire population. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada Kh A0TG 6(313) 951-9629.

Le tableau 3 est un classement recoupé des trois questions sur la langue posées lors du recensement, soit la langue maternelle, la langue parlée à la maison et la langue officielle.

Le tableau 4 donne des renseignements sur l'origine ethnique des répondants. Celle-ci comporte cinq catégories: Britannique, Français, toutes les autres origines combinées en un groupe et deux catégories sur les réponses multiples. Britannique et Français et autres réponses multiples.

Toutes les données de la présente publication sont recoupées selon le sexe.

FACTEURS DE GÉOGRAPHIE ET DE CONTENU

Divergences des chiffres entre les données intégrales et les données-échantillon (20%): Les chiffres de la population, des ménages, des logements ou des familles des tableaux utilisant les données-échantillon (20%) peuvent différer des données intégrales pour les raisons suivantes:

- (1) L'exclusion des pensionnaires d'institution: Ces derniers sont définis comme les personnes autres que les membres du personnel et de leurs familles qui vivent dans les logements collectifs tels que les foyers pour personnes âgées, les hôpitaux et les établissements de correction. On n'a pas recueilli de données-échantillon détaillées pour ce segment de la population.
- (2) Pondération: Les données-échantillon sont pondérées afin d'obtenir des estimations de la population tout entière. Cependant, les chiffres pondérés se caractérisent par la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les tableaux contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques ayant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations: Pour plus de renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada. Ottawa, Canada K1A 0T6 (613) 951-6929.

Users should also be aware that differences in counts may be due to the different subpopulations or universes for which the data are reported. For example, mobility data are reported for persons 5 years and over excluding those temporarily residing overseas; education and labour force data are reported for persons 15 years and over. Furthermore, data may be produced for subsets of these education and labour universes such as total labour force, employed labour force, etc. Similar differences may occur in tabulations for households, dwellings or families. The 1986 Census Dictionary (Catalogue No. 99-101E or P) provides more detailed information on universes or subpopulations by variable.

Incompletely enumerated Indian reserves and Indian settlements: On some Indian reserves or settlements, census enumeration was not permitted or was interrupted. Therefore, data are not available for these reserves and tables have been footnoted accordingly. This issue is discussed more fully in the SPECIAL NOTES section.

Additional information on geographic and content considerations, definitions of terms, explanations of data quality, etc., may be found at the end of this publication immediately following the tables (see grey pages). This information is presented separately in English and French sections for easier use.

1986 CENSUS PRODUCTS AND SERVICES

The 1986 Census product line is designed to serve the diverse needs of our users. Using as a base the most demanded publications of past censuses, a full series of data, reference and analytical publications will be offered.

In addition to the tabulations shown in publications, census data are available in machine-readable form. In particular, there is a set of 44 basic summary tabulations for small geographic areas including enumeration areas, census tracts and census subdivisions. The data contained in the

Les utilisateurs doivent également noter que les différences de chiffres peuvent s'expliquer par les différences de sous-population ou d'univers dont les données sont publiées. Ainsi, les données de la mobilité sont publiées pour les personnes âgées de cing ans et plus, excluant celles qui résident temporairement outre-mer: les données sur la scolarité et l'activité ne sont déclarées que pour les personnes âgées de 15 ans et plus. De plus, des données peuvent être produites pour les sousensembles de ces univers de la scolarité et de l'activité tels que la population active totale, la population active occupée, etc. Des différences similaires peuvent se glisser dans les tableaux pour les ménages, les logements ou les familles. Le Dictionnaire du recensement de 1986 (no 99-101F ou E au catalogue) contient plus de renseignements détaillés sur les univers ou les sous-populations par variable.

Réserves indiennes et établissements indiens partiellement dénombrés: Dans certaines réserves indiennes et établissements indiens, les recenseurs n'ont pas eu la permission d'effectuer le dénombrement ou ont dû l'interrompre. Les données ne sont donc pas disponibles pour ces réserves et des notes au bas des tableaux apparaissent selon le besoin. Pour des précisions à ce suiet, voir la section NOTES SPÉCIALES.

Vous trouverez d'autres renseignements complémentaires sur les facteurs de géographie et de contenu, la définition détaillée des termes, des précisions sur la qualité des données, etc., à la fin de la publication, immédiatement après les tableaux (voir les pages grises). Ces renseignements sont présentés dans des sections française et anglaise distinctes, ce qui en facilite la consultation.

PRODUITS ET SERVICES DU RECENSEMENT DE 1986

La gamme des produits du recensement de 1986 doit répondre aux besoins variés de nos utilisateurs. En fonction des publications les plus populaires des derniers recensements, nous offrirons une série complète de données, de documents de référence et d'ouvrages analytiques.

En plus des totalisations présentées dans les publications, les données du recensement sont disponibles sous forme lisible par machine. Notamment, une série de 44 totalisations sommaires de base existe pour les petitles régions géographiques comprenant les secteurs de dénombrement.

published profiles for census subdivisions and census divisions, census tracts, federal electoral districts, census metropolitan areas and census agglomerations are also available in machinereadable form.

While many tabulations are available from the planned output program, census tabulations can also be customized to individual users' needs. A range of products is offered, from predetermined basic data tabulations available for user-selected geographic areas, to complete custom tabulations which are developed to the exact requirements of the client. The products thus offer, on a cost-recovery basis, varying levels of flexibility in content, geography and medium.

OTHER LANGUAGE DATA PRODUCTS

There are several other products from the 1986 Census which contain language data. These include:

NATION SERIES

Language: Part 1 (Catalogue No. 93-102)

Mother tongue data are shown in this publication. It also includes selected figures from the 1981 Census.

Language: Part 2 (Catalogue No. 93-103)

Mother tongue, home language and official language data are shown in this publication. It also includes selected figures from the 1981 Census.

Income (Catalogue Nos. 93-114 and 93-115)

Catalogue No. 93-114, provides information on the total income of individuals cross-tabulated by mother tongue, while Catalogue No. 93-115, shows employment income by mother tongue and official language. secteurs de recensement et les subdivisions de recensement. Les données contenues dans les profils publiés pour les subdivisions de recensement et les divisions de recensement, les secteurs de recensement, les circonscriptions électorales lédérales, les régions métropolitaines de recensement et les agglomérations de recensement sont également disponibles sous forme lisible par machine.

Même si plusieurs totalisations sont disponibles à partir du programme des produits déjà établi, des totalisations du recensement peuvent également être personnalisées selon les besoins de l'utilisateur. Il est possible de se procurer une gamme de produits allant des totalisations de données fondamentales, déterminées à l'avance, disponibles pour les régions géographiques choisies par l'utilisateur, à des totalisations entièrement personnalisées et préparées selon les exigences précises du client. Ainsi, ces produits permettent d'offrir, contre recouvrement des coûts, différents niveaux de souplesse en matière de contenu, de géographie et de support.

AUTRES PRODUITS DE DONNÉES LINGUISTIQUES

Il existe plusieurs autres produits du recensement de 1986 qui contiennent des données linguistiques. Ils sont:

SÉRIE: LE PAYS

х

Langue: Partie 1 (nº 93-102 au catalogue)

Cette publication renferme des données sur la langue maternelle. Elle comprend également certains chiffres du recensement de 1981.

Langue: Partie 2 (nº 93-103 au catalogue)

Cette publication renferme des données sur la langue maternelle, la langue parlée à la maison et la langue officielle. Elle comprend également certains chiffres du recensement de 1981.

Revenu (nos 93-114 et 93-115 au catalogue)

La publication nº 93-114 donne des renseignements sur le revenu total des particuliers recoupés selon la langue maternelle tandis que la publication nº 93-115 donne le revenu d'emploi selon la langue maternelle et la langue officielle. 93-153

The Nation Series provides data for Canada, the provinces and the territories.

DIMENSION SERIES

Profile of Ethnic Groups (Catalogue No. 93-154)

For selected ethnic groups, data are shown by demographic, social and economic characteristics such as age, marital status, mother tongue, home language, official language, education and income. The level of geography is Canada only.

Profile of the Immigrant Population (Catalogue No. 93-155)

Data on various aspects of the immigrant population are provided. Language characteristics are shown - mother tongue, home language, official language - as well as other variables such as age, marital status, education and income. Data are provided for Canada, the provinces and the territories.

Census Metropolitan Areas (Catalogue No. 93-156)

Included are data on 30 to 65 languages, both for mother tongue and home language, along with official language data. Some tables show 1981 figures. This publication also includes a wide range of other variables. The tables are more detailed than in the "Profile Series". Information is shown for all census metropolitan areas in Canada (25).

Canadians and Their Occupations: A Profile (Catalogue No. 93-157)

This publication contains information on mother tongue and other population characteristics, cross-tabulated by selected occupations. The level of geography is Canada only.

La série "Le Pays" fournit les données pour le Canada, les provinces et les territoires.

SÉRIE: DIMENSIONS

Profil des groupes ethniques (nº 93-154 au catalogue)

Pour certaines origines ethniques, les données sont présentées selon certaines caractéristiques démographiques, sociales et économiques comme l'âge, l'état matrimonial, la langue maternelle, la langue parlée à la maison, la langue officielle, la scolarité et le revenu. Les données sont fournies pour le Canada seulement.

Profil de la population immigrante (nº 93-155 au catalogue)

Cette publication présente les données sur certains aspects de la population immigrante. Les caractéristiques linguistiques y figurent - la langue maternelle, la langue parlée à la máison et la langue officielle - ainsi que d'autres variables telles que l'âge, l'état matrimonial, la scolarité et le revenu. Ces données sont présentées pour le Canada, les provinces et les territoires.

Régions métropolitaines de recensement (nº 93-156 au catalogue)

Cette publication contient des données sur 30 à 65 langues, pour la langue maternelle et la langue parlée à la maison, ainsi que des données sur la langue officielle. Certains tableaux donnent les chiffres de 1981. Cette publication présente également une vaste gamme d'autres variables. Les tableaux sont plus détaillés que dans la série des profils. Les renseignements sont donnés pour toutes les régions métropolitaines de recensement au Canada (25).

Les Canadiens et leurs professions: Un profil (nº 93-157 au catalogue)

Cette publication donne des renseignements sur la langue maternelle et d'autres caractéristiques de la population recoupés selon certaines professions. Les données sont présentées pour le Canada seulement.

PROFILE SERIES

This series includes language data, as well as information on a wide range of other census variables. Data are presented for a variety of subprovincial areas: Census Divisions and Subdivisions (94-101 to 94-124), Federal Electoral Districts (94-125, 94-126, 94-133 and 94-134), Census Metropolitan Areas and Census Agglomerations (94-127 and 94-128), Census-tracted Centres (Census Tracts and Component Subdivisions) (95-101 to 95-174), Urban and Rural Areas (94-129 and 94-130) and Labour Force Survey Economic Regions (94-131). Data for profiles are also available in machine-readable form.

FOCUS ON CANADA SERIES

Canada - A Linguistic Profile (Catalogue No. 98-131)

This short study analyses three aspects of the language situation in Canada. First, the evolution of the language composition of the country is presented. Some Canadians speak most often in their home a language other than their mother tongue. These language shifts are a major factor in determining the mother tongue of the following generation. This theme is discussed in the second part. Finally, the growth of bilingualism across the country is also highlighted in this profile.

BASIC SUMMARY TABLES

This series is designed to meet the needs of users who wish to study the characteristics of small areas. Tables provide information on a variety of census variables. The following language tables are available:

| MT86A01 | Population by selected mot | her |
|---------|-------------------------------------|-----|
| | tongues (25) and sex (3) - 100% dat | a |

| LA86B01 | Population by official language (5), |
|---------|---|
| | age groups (8A) and sex (3) - 20% sample data |

LA86B02 Population by home language (25) and sex (3) - 20% sample data

SÉRIE: PROFILS

Cette série comprend des données linguistiques ainsi que des renseignements sur une vaste gamme d'autres variables du recensement. Les données sont présentées pour plusieurs régions infraprovinciales: divisions et subdivisions de recensement (94-101 à 94-124), circonscriptions électorales fédérales (94-125, 94-126, 94-133 et 94-134), régions métropolitaines de recensement et agglomérations de recensement (94-127 et 94-128) centres urbains divisés en secteurs de recensement (secteurs de recensement et subdivisions composantes) (95-101 à 95-174), régions urbaines et rurales (94-129 et 94-130) et régions économiques de l'Enquête sur la population active (94-131). Les données des profils sont également disponibles sous forme lisible par machine.

SÉRIE: LE CANADA À L'ÉTUDE

Le Canada - Un profil linguistique (nº 98-131 au catalogue)

Cette courte étude présente trois aspects de la question linguistique au Canada. Premièrement, on illustre l'évolution de la composition linguistique du pays. À la maison, certains Canadiens parlent le plus souvent une langue autre que leur langue maternelle. Ces transferts linguistiques ont une influence déterminante sur la langue maternelle de la génération suivante. La deuxième partie traite de ce sujet. Enfin, l'augmentation du bilinguisme à travers le pays est également en vedette dans ce profil

TABLEAUX SOMMAIRES DE BASE

Cette série est conçue pour répondre aux besoins des utilisateurs qui désirent étudier les caractéristiques des petites régions. Les tableaux donnent des renseignements sur une gamme de variables du recensement. Les tableaux linguistiques suivants sont disponibles:

| MT86A01 | Population | selon | certai | nes | lan- |
|---------|-----------------------------|-------|----------|------|-------|
| | gues materi données inté | | 5) et le | sexe | (3) - |

LA86B01 Population selon la langue officielle (5), le groupe d'âge (8A) et le sexe (3) données-échantillon (20%)

donnees-echantillon (20%)

LA86B02 Population selon la langue parlée à la maison (25) et le sexe (3) - données-

échantillon (20%)

The tables are produced for the following four geographic levels: (i) enumeration areas and federal electoral districts; (ii) census subdivisions (municipalities) and census divisions (counties); (iii) census tracts and provincial census tracts; (iv) Canada, provinces, territories and census metropolitan areas.

Data for the basic summary tables are available in machine-readable form to facilitate aggregation and manipulation.

ADJUSTED LANGUAGE DATA

For the first time in the 1986 Census, Canadians could report more than one language to the mother tongue and home language questions. Consequently, considerable care must be exercised when comparing 1986 and 1981 data. In order to facilitate the determination of trends, the 1986 Census data have been adjusted. Results are published in a special document entitled "Adjusted Language Data". This is available for Canada, the provinces and the territories and for selected census metropolitan areas.

REFERENCE PRODUCTS

Users, who may require assistance in understanding and interpreting the data and geographic concepts appearing in this set of tabulations, should refer to the 1986 Census Dictionary (Catalogue No. 99-101E or F). The Dictionary provides a range of definitions for all variables and terms used in 1986 Census data products.

Further details on the products and services available from the census are provided in the 1986 Census Products and Services - Final Edition (Catalogue No. 99-103E or F).

All users wishing to obtain more information about the range of census products available to serve their needs are invited to contact their nearest Statistics Canada Regional Office. A representative will be glad to help. Addresses and phone numbers are listed on page xxvii.

Les tableaux sont produits pour les quatre régions géographiques suivantes: (i) secteurs de dénombrement et circonscriptions électorales fédérales; (ii) subdivisions de recensement (municipalités) et divisions de recensement (comtés); (iii) secteurs de recensement et secteurs de recensement provinciaux; (iv) Canada, provinces, territoires et régions métropolitaines de recensement.

Les données des tableaux sommaires de base sont disponibles sous forme lisible par machine pour faciliter l'agrégation et la manipulation des données.

DONNÉES LINGUISTIQUES AJUSTÉES

Pour la première fois lors du recensement de 1986, les Canadiens pouvaient déclarer plus d'une langue aux questions sur la langue maternelle et la langue parlée à la maison. Par consequent, une attention particulière doit être apportée à la comparaison des données de 1986 et 1981. Pour faciliter l'établissement des tendances, les données du recensement de 1986 ont été ajustées. Les résultats ont été publiés dans un document spécial intitulé "Données linguistiques ajustées". Les données sont disponibles pour le Canada, les provinces, les territoires et certaines régions métropolitaines de recensement.

PRODUITS DE RÉFÉRENCE

Les utilisateurs qui ont besoin d'aide pour comprendre et interpréter les données et les concepts géographiques figurant dans cette série de totalisations peuvent consulter le Dictionnaire du recensement de 1986 (nº 99-101F ou E au catalogue). Le dictionnaire donne les définitions de toutes les variables et de tous les termes utilisés dans les produits du recensement de 1986.

D'autres détails sur les produits et services du recensement sont fournis dans les **Produits et** services du recensement de 1986 - Version définitive (n° 99-103F ou E au catalogue).

Les utilisateurs qui désirent obtenir plus de précisions sur la gamme des produits du recensement adaptés à leurs besoins sont invités à communiquer avec le bureau régional de Statistique Canada le plus près. Un représentant sera heureux de vous aider. Les adresses et les numéros de téléphone sont donnés à la page xui. 93-153

SYMBOLS

The following standard symbols are used in census publications:

- .. figures not available
- ... figures not appropriate or not applicable
 - nil or zero
- -- amount too small to be expressed
- Excludes 1986 Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For estimates of the missed population and dwellings, see Special Notes.
- † Excludes 1986 Census data for one or more incompletely enumerated Indian reserves or Indian settlements (see Special Notes).

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications du recensement.

93-153

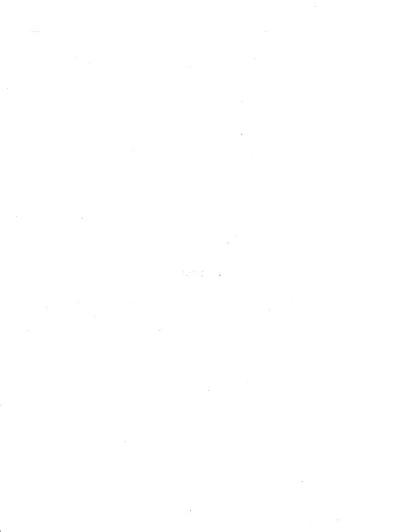

- .. nombres non disponibles
- ... n'avant pas lieu de figurer
- néant ou zéro
- -- nombres infimes
- Ne comprend pas les données du recensement de 1986 pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour une estimation de la population et des logements manquants, voir Notes spéciales.
- Ne comprend pas les données du recensement de 1986 pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés (voir Notes spéciales).

REFERENCE MATERIAL
IN
ENGLISH

DEFINITIONS

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the 1986 Census Dictionary (Catalogue No. 99-101E or F) for the full definitions and additional remarks related to these concents and definitions.

ETHNIC ORIGIN

Refers to the ethnic or cultural group(s) to which the respondent or the respondent's ancestors belong. Ethnic or cultural group refers to the "roots" or ancestral origin of the population and should not be confused with citizenship or nationality.

It should be noted that prior to the 1981 Census, only the respondent's paternal ancestry was to be reported. If multiple ethnic origins were reported, only one origin was captured, resulting in one ethnic origin per respondent. In 1981, this restriction was removed, allowing for multiple ethnic origins. One write-in was provided on the 1981 questionnaire, in addition to the mark boxes. The 1986 Census questionnaire allows respondents to write in up to three ethnic origins not included in the mark boxes. This increases the number of multiple response possibilities.

The 1986 question was changed slightly from that asked in the 1981 Census. In 1981, respondents were asked, "To which ethnic or cultural group did you or your ancestors belong on first coming to this continent." The phrase "on first coming to this contienent" was removed from the 1986 question. The 1986 ethnic origin question was: "To which ethnic or cultural group(s) do you or did your ancestors belong?"

HOME LANGUAGE

Refers to the language spoken at home by the individual at the time of the census. If more than one language was spoken, the language spoken most often by the individual was to be reported.

In 1986, the following instructions were provided to respondents:

"You should report the language you yourself speak most often at home. If you are answering for someone else, report the language that he/she speaks most often.

If you speak two languages equally often, report both.

For a child who has not yet learned a language, report the language spoken most often at home. If two languages are used equally often, report both.

If you are mute, report the language you use most often at home to make yourself understood.

If you live alone, report the language in which you feel most comfortable.

Persons who speak an Indian language (from India) should not report Indian but rather Hindi, Urdu, Punjabi or some other language as applicable. Persons who speak an Amerindian language (North American Indian) should report Cree, Ojibway or some other Amerindian language as applicable."

MOTHER TONGUE

Refers to the first language learned in childhood and still understood by the individual at the time of the census.

In 1986, the following instructions were provided to respondents:

"You should report the first language you learned in childhood, that is, before you went to school. If you no longer understand that language, report the second language you learned. If you are answering for someone else, report the first language that he/she learned in childhood.

If you understand more than one language, report the one you learned first. If you learned two languages at the same time, report the language you yourself spoke most often at home. If you used the two languages equally often, report both.

For a child who has not yet learned a language, report the language he/she will first be learning at home. If he/she is learning two languages at the same time, report the one in which he/she is spoken to most often. If the two languages are used equally often, report beth.

Persons who speak an Indian language (from India) should not report Indian but rather Hindi, Urdu, Punjabi or some other language as applicable. Persons who speak an Amerindian language (North American Indian) should report Cree, Ojibway or some other Amerindian language as applicable."

OFFICIAL LANGUAGE

Refers to the ability to conduct a conversation in English and French, the official languages of Canada.

It should be emphasized that the official language question data are based on the individual's own assessment of his or her abilities.

In 1986, the following instructions were provided to respondents:

"Do not report French or English learned at school unless you can conduct a conversation of some length on various topics in that language.

For a child who has not yet learned a language, report the language spoken most often at home if it is either English or French. If the two languages are used equally often report "English and French". If neither language is used often, mark "Neither English nor French".

If you are mute, report English, French or both provided you are able to make yourself understood in one or both of these languages."

SAMPLING AND WEIGHTING

The 1986 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. (Note that, on Indian reserves and in remote areas, all data were collected on a 100% basis. In the Northwest Territories, data were collected on a 100% basis but, for the communities of Fort Smith, Hay River, Pine Point and Yellowknife, the data were processed on a 20% basis,

For any given geographic area, the weighted population, household, dwelling or family, total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

DATA QUALITY

GENERAL

The 1986 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials. through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- coverage errors, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- non-response errors, which result from the fact that responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- response errors, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response:
- processing errors, which can occur at various steps including: coding, when "write-in" responses are transformed into numerical codes by clerks; data capture, when responses are transferred from the census questionnaire to

93-153

computer tapes by key-entry operators; and imputation, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record).

- sampling errors, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

COVERAGE ERRORS

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counter.

Missed dwellings or persons result in undercoverage. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in overcoverage. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately, instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be

double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not a Canadian resident may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1986, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant were revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households missed because their dwelling was incorrectly classified as vacant. Secondly, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province, the magnitude of this residual undercoverage in the 1986 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. Undercoverage is offset to some degree by overcoverage errors, and in 1986 for the first time a special study was carried out to investigate overcoverage errors.

OTHER NON-SAMPLING ERRORS

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensuring as complete a response as possible. Census Representatives edit the questionnaires and follow up any missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the

collection stage, a small number of responses are missing. Although missing entries are eliminated during processing, there remains some potential non-response error. This is particularly serious if the non-respondents differ in some respects from the respondents since, as described in a later paragraph, a missing value is replaced by the corresponding entry for a "similar" record. If respondents and non-respondents differ in terms of the characteristics involved, this procedure will result in non-response bias.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as response errors. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a verbal response to be written in. During regional processing, these "write-in" entries are given a numeric code. Coding errors can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of each coder's work and taking corrective action where necessary.

After the coding and certain other manual processing steps are complete, the information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of data capture errors. First, certain edits (such as range checks) are performed as the data are keyed. Secondly, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on

the record. In most cases, however, this is not possible and a valid response is obtained from a "donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records are similar, on average, to the valid records are similar, on average as unforced out when results are tabulated for a sufficiently large geographical area or subgroup of the population.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1986 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1986 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons. there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth, etc.), the responses obtained in the 1986 Census, for a sample of individuals, are being compared with those for the same individuals in the 1981 Census. Also, following the 1986 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time. however, interviewers asked a series of detailed questions on language, ethnic origin and structural type of dwelling, the responses to which will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

SAMPLING ERRORS

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value in the column of the standard error table whose heading is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000 the range would be 1 000 the 7 - 3X85 or 1,000 the range would be 1 000 the 7 - 3X85 or 1,000 the range would

The standard errors given in the table below will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1986 Census will vary, however, from one characteristic to another and from one geographic area to another. The

standard error values in the table below may, therefore, understate or overstate the error due to sampling.

For further information on the quality of census data, contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6929

CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant error to the census data. However, since totals are independently rounded, they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census tabulations. percentages, which are calculated on rounded figures, do not necessarily add to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data.

Of concern to some users is that small cell counts may suffer a significant distortion as a result of random rounding. This distortion is the protection against disclosure and individual data cells containing these small numbers may lose their precision as a result. Since the rounding is of a random nature, however, when data cells are reggregated by the user, the rounding errors tend to cancel out. Distortions may be further reduced by building in the appropriate subtotals into tabulations. Also available is the option of requesting custom tabulations from the census

Table: Approximate Standard Error Due to Sampling for 1986 Census Sample Data

| Cell Value | | | | | | | | | | | | |
|-------------------|----|-----|-----|-----|-------|-------|-------|--------|--------|--------|---------|---------|
| Approximate | 50 | 100 | 200 | 500 | 1,000 | 2,000 | 5,000 | 10,000 | 20,000 | 50,000 | 100,000 | 500,000 |
| Standard Error | 15 | 20 | 30 | 45 | 65 | 90 | 140 | 200 | 280 | 435 | 600 | 1,300 |

microdata bases. With custom products, random rounding occurs after data cells have been aggregated thus minimizing any distortion.

In addition to random rounding, procedures such as area and cell suppression have been adopted to further protect the confidentiality of individual responses.

With area suppression, all characteristic data for the geographic area are deleted and replaced with the symbol (XXX). The extent to which data are suppressed depends upon whether the area is a standard geographic area, i.e. aggregated from enumeration areas (federal electoral districts census divisions, census subdivisions, census tracts, etc.) or a non-standard area specified by the user for a custom tabulation. Data are deleted if the population is less than 40 persons for standard areas and less than 100 persons for non-standard areas. For tables involving income distributions. the suppression of data is extended to geographic areas with a total population of less than 250. Suppressed data are, however, included in the appropriate higher aggregate subtotals and totals. This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary data products, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Note: For data collected on a 20% sample basis, area suppression is based on the non-institutional population rather than the total population since sample data were not collected for the institutional population.

With cell suppression, the minimum acceptable value for a cell is specified. All cell values below the designated cut-off are deleted and replaced by the symbol (XXX). However, the suppressed data are included in the appropriate higher aggregate subtotals and totals. For 1986 data products, two different methods of cell suppression are being implemented. For publications in "The Nation" and "Dimensions" series involving income, detailed occupation or detailed industry, the distribution is being suppressed where less than 250 persons or units are involved. In semi-custom and custom tabulations of variables collected on a sample basis, all cells with a value of "5" (after random rounting) are being suppressed.

SPECIAL NOTES

POPULATION COUNTS BASED ON USUAL RESIDENCE

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada. In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

INCOMPLETELY ENUMERATED INDIAN RESERVES AND INDIAN SETTLEMENTS

On some Indian reserves and Indian settlements in the 1986 Census, enumeration was not permitted or was interrupted before it could be completed.

Data for 1986 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves or settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for affected geographic areas, comparisons (e.g., percentage change) between 1981 and 1986 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can increase for smaller areas containing a larger proportion of affected reserves and settlements.

While it is not possible to estimate the population of each incompletely enumerated reserve, estimates of the missed total population and total occupied dwellings at the provincial level have been made and are shown in the Appendix.

Note, however, that it was not possible to estimate any characteristics of the missed population, even at the provincial level. Additional information on this subject can be obtained by referring to the User Information Bulletin, Number I, "Summary of the Methodology for Estimating the Population and Occupied Private Dwellings on Incompletely Enumerated Indian Reservers".

COMPARABILITY AND QUALITY OF LANGUAGE DATA

Comparison between 1981 and 1986

Mother tongue and home language. The language questions were the same in the last two censuses, but the instructions to respondents were modified for mother tongue and home language. In 1981, respondents were asked to indicate only one mother tongue and only one home language; nevertheless, 597,980 persons (2.5% of the population) reported more than one mother tongue and 535,735 persons (2.2% of the population) reported more than one mother tongue and 535,735 persons (2.2% of the population) reported more than one home language.

To better reflect the linguistic reality in Canada, these instructions were dropped from the 1986 Census. Under the new guidelines, individuals could report more than one mother tongue if they had learned them at the same time and had spoken one as frequently as the other when they were children. Similarly, respondents could indicate more than one home language if they were now speaking them equally often at home.

The number of multiple responses given in the 1986 Census was significantly higher than in the 1981 Census. In 1986, 954,940 persons or 3.8% of the population reported a multiple response to the mother tongue question, while 1,159,675 or 4.6% of the population indicated more than one home language.

This increase was the result either of the changes made in the questionnaire, of changes in the way in which the population answers language questions or of an increase in the number of persons who had more than one mother tongue or spoke more than one language at home. A combination of these factors may also explain the increase in multiple responses.

When the 1981 data were processed, only one language was retained for publication, even in cases where the respondent reported more than one. In 1986, responses indicating more than one language were accepted.

In order to facilitate the determination of the trends between the two censuses, the 1986 Census results have been adjusted. In cases where more than one language was reported, the multiple responses were distributed among the component languages in the same proportions as in the 1981 Census. The results have been published in a special document entitled "Adjusted Language Data", April (1988). Also, data from the 1981 Census have been adjusted to show the multiple responses reported at that time. The data are presented in Table 4 of publications 93-102 (mother tongue) and 93-103 (home language). These adjustments to the mother tongue and home language figures make it easier to relate the 1986 data to the 1981 data, but do not make the results of the two censuses entirely comparable. Consequently, considerable care must be exercised in the interpretation of changes between 1981 and 1986

The 1986 classification of languages differs from that used in 1981, especially with regard to the aboriginal languages. Appendix B of the 1986 Census Dictionary (Catalogue No. 99-101E) provides a description of the changes.

Official language. Some respondents report speaking English or French or both at home, while on the other hand they indicate in the official language question, that they cannot carry on a conversation in these languages.

In such cases, in the 1981 Census, the answer to the official language question was considered erroneous. Consequently, during data processing, this answer was changed to show that the person could speak the official language(s) they had reported to the home language question.

In the 1986 Census, not all of these responses were considered erroneous. If the respondent indicated being able to speak only one official language either English or French - and this language matched the person's mother tongue, no correction was made during processing. Consequently, these response patterns appear as such in the 1986 tabulations.

For further information on language data, contact the Housing, Family and Social Statistics Division, Statistics Canada, Ottawa, Canada K1A 0T6.

⁽¹⁾ Includes all private dwellings occupied by usual residents as well as private dwellings occupied solely by foreign and/or temporary residents.

ACCESSIBLE FROM COAST TO COAST

Statistics Canada's regional reference centres provide a full range of the census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase census publications, microcomputer diskettes, microfiche, maps and more. Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems - CANSIM and TELICHART. A telephone inquiry service is also available with toll-free numbers for regional clients outside local calling areas. Many other services - from seminars to consultations - are offered. Call or write your regional reference centre for information. For a brief description of the products and services available from the 1986 Census consult the section on Guidelines for Using This Publication

93-153

DOCUMENTS DE RÉFÉRENCE EN FRANÇAIS

93-153

DÉFINITIONS

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le Dictionnaire du recensement de 1886 (n° 99-101F ou E au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

LANGUE MATERNELLE

Première langue apprise dans l'enfance et encore comprise par le recensé au moment du recensement.

En 1986, les instructions ci-après étaient fournies aux recensés:

"Vous devez indiquer la première langue que vous avez apprise dans votre petite enfance, c'est-à-dire avant d'aller à l'école. Si vous ne la comprenez plus, indiquez la seconde langue que vous avez apprise. Si vous répondez pour une autre personne, indiquez la première langue qu'elle a apprise dans sa petite enfance

Si vous comprenez plusieurs langues, indiquez celle que vous avez apprise en premier lieu. Si vous en avez appris deux simultanément, indiquez celle que vous parliez vous-même le plus souvent à la maison. Si vous les utilisiez également, indiquez-les toutes les deux.

Dans le cas d'un enfant qui n'a pas encore appris à parler, indiquez la langue qu'il apprendra en premier lieu à la maison. S'il apprend simultanément deux languez indiquez celle dans laquelle on lui parle le plus souvent. Si les deux sont utilisées également, indiquez-les toutes les deux

Les personnes de langue indienne (de l'Inde) ne doivent pas indiquer indien mais plutôt hindi, ourdou, pendjabi ou une autre langue, selon le cas. Les personnes de langue amérindienne (indien(ne) de l'Amérique du Nord) doivent indiquer le cri, l'ojibway ou une autre langue amérindienne, selon le cas."

LANGUE OFFICIELLE

Indique si le recensé peut soutenir une conversation en anglais ou en français, les langues officielles du Canada. Il convient de souligner que les données provenant de la question sur les langues officielles portent sur l'auto-évaluation par les recensés de leur capacité de parler les deux langues officielles.

En 1986, les instructions ci-après étaient fournies aux recensés:

"N'indiquez pas l'anglais ou le français appris à l'école à moins de pouvoir soutenir une conversation assez longue sur divers sujets dans cette langue.

Dans le cas d'un enfant qui n'a pas encore appris à parler, indiquez la langue parlée le plus souvent à la maison s'il sagit de l'anglais ou du français. Si l'une est aussi réquemment utilisée que l'autre, indiquez "L'anglais et le français". Cochez la case "Ni l'anglais ni le français" quand ni l'une ni l'autre n'est fréquemment utilisée.

Si vous êtes muet(te), indiquez l'anglais, le français ou les deux dans la mesure où vous pouvez vous faire comprendre dans cette (ces) langue(s)."

LANGUE PARLÉE À LA MAISON

Langue que le recensé parlait à la maison au moment du recensement. Si le recensé parlait plus d'une langue, il devait indiquer la langue qu'il utilisait le plus fréquemment.

En 1986, les instructions ci-après étaient fournies aux recensés:

"Vous devez indiquer la langue que vous parlez vous-même le plus souvent à la maison. Si vous répondez pour une autre personne, indiquez la langue qu'elle parle le plus souvent.

Si vous parlez deux langues également, indiquez-les toutes les deux.

Dans le cas d'un enfant qui ne parle pas encore, indiquez la langue le plus souvent parlée à la maison. Si deux langues sont également utilisées, indiquez-les toutes les deux.

Si vous êtes muet(te), indiquez la langue dont vous vous servez le plus souvent à la maison pour vous faire comprendre.

Si vous demeurez seul(e), indiquez la langue dans laquelle vous êtes le plus à l'aise. Les personnes d'origine indienne (de l'Inde) ne doivent pas indiquer indien mais plutôt hindi, ourdou, pendjabl ou une autre langue, selon le cas. Les personnes d'origine amérindienne (indien(ne) de l'Amérique du Nord) doivent indiquer le cri, l'ojibway ou une autre langue amérindienne, selon le cas."

ORIGINE ETHNIQUE

Groupe(s) ethnique(s) ou culturel(s) auquel (auxquels) appartenait(aient) le recensé ou ses ancêtres. Le groupe ethnique ou culturel se rapporte à l'origine des ancêtres, aux "racines" de la population et ne doit pas être confondu avec la citoyenneté ou la nationalité.

Il convient de souligner qu'antérieurement au recensement de 1981, les recensés devaient déclarer uniquement les antécédents ethniques ou culturels du côté paternel. Même si plusieurs origines ethniques avaient été déclarées, une seule était saisie; autrement dit, une seule origine ethnique était retenue pour chaque recensé. En 1981, cette restriction a été supprimée de facon à tenir compte des origines multiples. Dans le questionnaire de 1981, un espace était prévu pour une réponse en toutes lettres, en plus des cases de réponse. Dans le questionnaire de 1986, les recensés peuvent déclarer jusqu'à trois origines ethniques en plus de celles qui sont proposées dans les cases de réponse. Cela augmente le nombre de réponses multiples possibles.

Dans le questionnaire de 1986, la question est légèrement différente de celle de 1981. En 1981, on demandait aux recensés: "A quel groupe ethnique ou culturel apparteniez vous, vous ou vos ancêtres, à votre première arrivée sur ce continent?" La précision "à votre première arrivée sur ce continent à été supprimée dans le questionnaire de 1986. En 1986, la question a été reformulée comme suit: "À quel(s) groupe(s) ethnique(s) ou culturel(s) appartenez-vous ou vos ancêtres apparteniez-lis?"

ÉCHANTILLONNAGE ET PONDÉRATION

Les données du recensement de 1986 ont été recueillies sur une base de 100% (c'est-à-dire auprès de tous les ménages) ou par un échantillonnage aléatoire des ménages; ces données sont pondérées afin de fournir des estimations sur l'ensemble de la population. Les renseignements figurant dans le présent bulletin ont été recueillis auprès d'un échantillon de 20% et pondérés afin de compenser l'effet de l'échantillonnage. Tous les

titres des tableaux ont été annotés en conséquence. (Veuillez remarquer que, dans les réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de toute la population. Dans les Territoires du Nord-Ouest, les données ont été recueillies auprès de toute la population mais, pour les collectivités de Fort Smith, Hay River, Pine Point et Yellowknife, seulement 20% des données ont été traifées)

Quelle que soit la région géographique, le total ou total partiel pondéré de la population, des ménages, des logements ou des familles peut différer de celui qui figure dans les bulletins de données intégrales. Cet écart (outre l'effet de l'arrondissement aléatoire) sera attribuable à l'échantillonnage.

QUALITÉ DES DONNÉES

GÉNÉRALITÉS

Le recensement de 1986 a été un projet complexe de grande envergure. Même si l'on a déployé des efforts considérables pour maintenir des normes élevées tout au cours des activités de collecte et de traitement, les estimations obtenues sont inévitablement entachées d'erreurs. Les utilisateurs doivent savoir que ces erreurs existent et avoir une idée générale des principales composantes du recensement afin d'être en mesure de déterminer si les données du recensement peuvent leur être utiles et évaluer les risques que comporte le fait de baser leurs conclusions ou leurs décisions sur ces deurnées

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, allant de la préparation des documents au traitement des données, en passant par l'établissement des listes des logements et la collecte des données. Certaines erreurs peuvent survenir plus ou moins au hasard et, lorsque les différentes réponses sont agrégées pour un groupe suffisamment grand, elles tendent à s'annuler. Dans le cas des erreurs de cette nature, plus le groupe est grand, plus l'estimation correspondante est exacte. C'est pour cette raison que les utilisateurs sont invités à employer avec une certaine réserve les petites estimations. Par contre, d'autres erreurs peuvent se produire systématiquement et entraîner des estimations "biaisées". Comme le biais découlant de ces erreurs est persistant, peu importe la taille du groupe pour lequel les réponses sont agrégées, et qu'il est particulièrement difficile à mesurer, les erreurs systématiques posent un plus grave problème à la plupart des utilisateurs des données que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants:

- les erreurs d'observation, qui se produisent lorsqu'on oublie des logements ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois:
- les erreurs dues à la non-réponse, qui découlent du fait qu'on n'a pas pu obtenir de réponses d'un petit nombre de ménages et(ou) de personnes à cause d'une absence prolongée ou pour toute autre raison:
- les erreurs de réponse, qui surviennent lorsque le répondant, et parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les erreurs de traitement, qui peuvent se produire à diverses étapes, notamment: au codage, lorsque les commis transforment les réponses en toutes lettres en codes numériques; à la saisie des données, lorsque les préposés à l'introduction des données transfèrent sur les bandes pour ordinateur les réponses figurant sur le questionnaire du recensement; à l'imputation, lorsque l'ordinateur insère dans un enregistrement une réponse "vailée", mais pas nécessairement exacte, pour remplacer des données manquantes ou "invalides" (une réponse est "vailde" si elle est conforme aux autres renseignements de l'enregistrement, elle est "invalide" si elle rest pas conforme);
- les erreurs d'échantillonnage, qui s'appliquent uniquement aux questions supplémentaires figurant sur la formule complète et s'adressant à un échantillon d'un cinquième des ménages; elles résultent du fait que les réponses à ces questions, lorsqu'elles sont pondérées pour représenter l'ensemble de la population, différent inévitablement des résultats qu'on aurait obtenus si on avait posé ces questions à tous les ménages.

Les types d'erreur ci-dessus ont chacun une composante aléatoire et une composante systématique. Toutefois, la composante systématique des erreurs d'échantillonnage est généralement très faible par rapport à la composante aléatoire. Par contre, dans le cas des erreurs non dues à l'échantillonnage, les deux composantes peuvent être importantes.

ERREURS D'ORSERVATION

Les erreurs d'observation peuvent influer sur la précision des chiffres du recensement, c'est-à-dire la taille des divers univers du recensement: la population, les familles, les ménages et les logements. Bien qu'on ait pris quelques mesures pour corriger les erreurs identifiables, une certaine marge d'erreur subsiste toujours dans les chiffres définitifs du fait que des logements ou des personnes ont été oubliés, pris en compte par erreur dans le recensement ou comptés deux fois.

Si des logements ou des personnes n'ont pas été pris en compte alors qu'ils auraient dû l'être, on a un sous-dénombrement. Des logements peuvent être oubliés à la suite d'une mauvaise interprétation des limites des secteurs de dénombrement (SD) ou du fait que des logements sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées quand le logement est oublié ou classé comme inoccupé, ou quand certains membres des ménages sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Certaines personnes peuvent être oubliées parce qu'elles n'ont aucun lieu habituel de résidence et qu'elles ne se trouvaient dans aucun logement la nuit du recensement

Les logements ou les personnes qui ont été pris en compte par erreur ou qui ont été comptés deux fois donnent lieu à un surdénombrement. Le surdénombrement des logements peut se produire lorsque des constructions ne convenant pas à l'habitation sont comptées comme des logements ou lorsque des unités qui ne correspondent pas à la définition d'un logement utilisée dans le recensement sont énumérées séparément au lieu d'être considérées comme faisant partie d'un grand logement. Le double compte des logements peut se produire, par exemple dans les cas où les limites des SD ne sont pas clairement définies. Les personnes peuvent être comptées deux fois parce que leur logement est compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. Parfois, une personne qui n'habite pas habituellement le Canada peut être comptée, à tort, dans le recensement. En movenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

En 1986, on a entrepris quatre études pour mesurer les différents aspects des erreurs d'observation. Premièrement, on a revisité un échantillon des logements dénombrés comme inoccupés afin de

vérifier s'ils étaient vraiment inoccupés le jour du recensement. On a rectifié les chiffres définitifs du recensement pour tenir compte des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon des personnes dénombrées comme résidents temporaires pour vérifier si elles ont été dénombrées à leur lieu habituel de résidence. Au moyen de cet échantillon, on a pu estimer le nombre de personnes qui ont été oubliées parce qu'elles étaient temporairement absentes de leur lieu habituel de résidence. On a apporté les corrections correspondantes aux chiffres de population définitifs. Malgré ces corrections, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Pour l'ensemble du Canada et pour chaque province, on mesure l'ampleur de ce sous-dénombrement résiduel dans le recensement de 1986 au moyen d'une étude spéciale: la Contre-vérification des dossiers. Le sous-dénombrement est généralement plus élevé pour certains groupes de la population, tels que les jeunes hommes adultes et les récents immigrants. Le sous-dénombrement est compensé dans une certaine mesure par les erreurs de surdénombrement; en 1986, pour la première fois une étude spéciale est maintenant en cours, pour déterminer les erreurs de surdénombrement.

AUTRES ERREURS NON DUES À L'ÉCHANTILLONNAGE

Les erreurs d'observation font varier le nombre d'unités dans les divers univers du recensement, tandis que d'autres genres d'erreur font varier les caractéristiques de ces unités.

Il est parfois impossible d'obtenir d'un ménage une réponse complète, même si le logement a été jugé occupé et un questionnaire a été livré. Les membres du ménage ont pu s'absenter pendant toute la période du recensement ou, dans de rares cas, le chef de ménage a pu refuser de remplir le questionnaire. Il arrive plus souvent que le questionnaire est retourné, mais que les données fournies à certaines questions ou pour certaines personnes sont incomplètes. Nous déployons des efforts considérables pour obtenir la réponse la plus complète possible. Les recenseurs vérifient les questionnaires et effectuent des suivis s'il manque des données. Le travail des recenseurs est ensuite vérifié par un surveillant et un technicien du contrôle qualitatif. Malgré ces mesures, à la fin de la phase de collecte des données, il manque un petit nombre de réponses. Bien que les entrées manquantes soient éliminées pendant le traitement des données, il peut toujours se glisser quelques erreurs dues à la non-réponse. Ce genre d'erreur est particulièrement grave si les non-répondants

sont différents des répondants à certains égards puisque, comme on le décrit dans un paragraphe ultérieur, la valeur manquante est remplacée par une valeur correspondante tirée d'un dossier "similaire". Si certaines caractéristiques des nonrépondants différent de celles des répondants, cette méthode entraine un biais dù à la non-réponse.

Même lorsqu'on obtient une réponse, il se peut qu'elle ne soit pas tout à fait précise. Le répondant peut avoir mal interprété la question ou avoir donné une réponse incertaine, surtout s'îl a répondu pour un autre membre du ménage qui était peut-être absent. Ces erreurs sont appelées erreurs de réponse soient que les erreurs de réponse soient en général attribuables à des renseignements imprécis fournis par les répondants, elles peuvent parfois être liées à des erreurs qu'a faites le recenseur au moment oû il a rempli certaines sections du questionnaire, comme le type de construction résidentielle, ou lorsqu'il a rappelé le répondant pour obtenir des données manquantes.

À certaines questions du recensement, il faut inscrire une réponse en toutes lettres. Pendant le dépouillement au bureau régional, on attribue un code numérique à ces réponses "écrites". Il peut alors se produire des grerurs de codage, surtout lorsque la liste des codes est longue (comme dans le cas de la langue, de l'origine et hnique, de l'industrie et de la profession) ou lorsque la réponse écrite est ambigué, incomplète ou difficile à lire. En vérifiant un échantillon du travail de chaque préposé au codage et en prenant des mesures correctives s'il y a lieu, on peut contrôler les erreurs de codage, sans toutefois les éliminer complètement.

Après le codage et certaines autres étapes du dépouillement manuel des données, les renseignements figurant sur les questionnaires sont introduits sur clavier dans un fichier d'ordinateur. Deux procédures servent à contrôle le nombre d'erreurs à la saisie des données. Permièrement, certaines vérifications (comme le contrôle des tranches) sont effectuées au moment de l'introduction des données. Deuxièmement, un échantillon de chaque lot de documents est réintroduit et comparé à la série de données originale. Si le nombre d'erreurs dans la série originale est supérieur à un nombre déterminé, tout le lot doit êttre réintroduit.

Une fois que les données sont saisies, elles sont envoyées à Ottawa, où elles font l'objet d'une série de contrôles informatiques permettant de découvrir des réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord décider quelle réponse doit être considérée non valide. Les réponses non valides ou manquantes doivent ensuite être remplacées par de bonnes réponses, c'est-à-dire par des réponses compatibles avec les autres données figurant sur l'enregistrement. Dans une faible proportion de cas, la bonne réponse peut être déduite à partir des autres données de l'enregistrement. Toutefois, dans la plupart des cas, cela est, impossible, et, la bonne réponse est tirée d'un enregistrement "donneur" choisi au hasard parmi un groupe d'enregistrements cohérents où un certain nombre de caractéristiques connexes sont similaires à celles de l'enregistrement incomplet. On ne peut bien sûr garantir que la valeur imputée sera nécessairement la bonne réponse pour la personne concernée. Néanmoins, si les enregistrements contenant des données non valides ou manquantes sont, en movenne, similaires aux enregistrements valides, les erreurs à l'imputation sont plus ou moins éliminées lorsque les résultats sont totalisés pour une région géographique ou un sous-groupe de la population suffisamment important.

On mène actuellement diverses études pour évaluer la qualité des réponses obtenues dans le cadre du recensement de 1986. Pour chaque question, on a calculé des taux de réponse et des taux de rejet à la vérification. Ces taux peuvent servir à déterminer la présence possible d'erreurs dues à la non-réponse et d'autres erreurs. De plus. les totalisations du recensement de 1986 ont été, ou seront, comparées à des estimations corresnondantes établies à partir de recensements antérieurs, d'enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les extraits de naissances et les rapports d'évaluation municipale). Ces comparaisons peuvent indiquer certains problèmes potentiels au niveau de la qualité ou du moins certaines incohérences entre les sources d'information.

En plus de ces comparaisons globales, on étudie actuellement les données de certains particuliers en comparant les réponses du recensement à une autre source de renseignements. Pour certaines caractéristiques "stables" (comme l'âge, le sexe, la langue maternelle, le lieu de naissance, etc.), les réponses obtenues au recensement de 1986 sont comparées aux renseignements fournis pour les mêmes personnes au recensement de 1981. De plus, après le recensement de 1986, on a dénombré une seconde fois un échantillon de répondants, surtout pour déterminer les taux de surdénombrement. En même temps, les interviewers ont posé une série de questions détaillées sur la langue, l'origine ethnique et le type de construction résidentielle, et les réponses seront comparées aux réponses fournies au recensement, ce qui nous permettra de déterminer les erreurs de réponse et. nous l'espérons, de les comprendre.

ERREURS D'ÉCHANTILLONNAGE

Les estimations qui sont obtenues par la pondération des réponses recueillies auprès d'un échantillon sont sujettes à une erreur vu que la répartition des caractéristiques au sein de l'échantillon n'est habituellement pas identique à la répartition des caractéristiques au sein de la population à partir de laquelle l'échantillon a été préleyé.

L'erreur possible introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique au sein de la population. Lorsqu'il y a des cases comportant des chiffres assez grands, l'erreur possible attribuable à l'échantillonnage, en proportion de la valeur de la case, sera relativement petite. Si les valeurs des cases sont petites, cette erreur, en proportion de la valeur de la case, esta toutefois relativement importante.

L'erreur possible due à l'échantillonnage est généralement exprimée en termes d'erreur typer. Ceci est la racine carrée de la moyenne, tirée de tous les échantillons possibles de même taille et du même plan, de l'écart quadratique de l'estimation de l'échantillonnage à la valeur pour la population totale.

Le tableau à la page suivante présente une évaluation approximative de l'erreur type provenant de l'échantillonnage. Cette évaluation ne devrait servir que de guide.

Les utilisateurs qui désirent connaître l'erreur approximative provenant de l'échantillonnage pour une case de données en particulier, d'après l'échantillon de 20%, n'ont qu'à choisir la valeur de l'erreur type dans la colonne du tableau des erreurs types dont la rubrique est le plus près de la valeur de la case dans la totalisation du recensement. Lorsqu'il utilise la valeur obtenue de l'erreur type, l'utilisateur peut en général être raisonnablement certain que la valeur réelle de la population recensée (si l'on ne tient compte d'aucune forme d'erreur autre que l'échantillonnage) se situera à plus ou moins trois fois l'erreur type (par exemple, pour une case dont la valeur est 1,000, l'écart s'étendra de 1.000 + ou - 3X65 ou 1.000 + ou -195)

Les erreurs types données dans le tableau cidessous ne s'appliqueront pas aux totaux ou totaux partiels de la population ou de l'univers (personnes, ménages, logements ou familles) de la région géographique à l'étude (voir Échantillonnage et pondération). On peut connaître l'feft de l'échantillonnage sur ces cases en consultant la publication correspondante qui présente les données intégrales.

Les répercussions du plan d'échantillonnage et de la procédure de pondération utilisés au recensement de 1986 varieront cependant d'une caractéristique à une autre et d'une région géographique à l'autre. Les valeurs de l'erreur type dans le tableau ci-dessous pourront toutefois surestimer ou sous-estimer l'erreur provenant de l'échantillonnage.

Pour de plus amples renseignements sur la qualité des données du recensement, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada KIA 0T6 (613) 951-692)

CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres publiés dans le présent rapport ont subi un "arrondissement aléatoire" qui supprime toute possibilité d'associer des chiffres à une personne facilement reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de "5". Cette technique assure une protection efficace contre la divulgation directe, par soustraction ou par méthode résiduelle, sans ajouter d'erreur significative aux données du recensement. Cependant, comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis

dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages calculés à partir de chiffres arrondis ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont basées sur des données non arrondies.

La distorsion importante pouvant résulter de l'arrondissement aléatoire lorsqu'il s'agit de cases de faible valeur préoccupe certains utilisateurs. Cette distorsion, qui assure la protection contre la divulgation, entraîne une perte de précision des cases de données renfermant des chiffres peu élevés. Cependant, comme il s'agit d'une méthode aléatoire, les erreurs dues à l'arrondissement ont tendance à disparaître lorsque les cases de données sont agrégées de nouveau. Il est aussi possible de réduire les distorsions en intégrant des totaux partiels dans les totalisations. On peut aussi choisir de demander des totalisations spéciales établies à partir des bases de microdonnées du recensement. Dans le cas de produits personnalisés, l'arrondissement aléatoire se fait après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, telles que la suppression des régions et des cases, afin d'assurer encore mieux la confidentialité des réponses.

Dans le cadre de la suppression des régions, toutes les données caractéristiques se rapportant à la région géographique sont supprimées et remplacées par le symbole (XXX). La suppression des données se fait différemment selon qu'il s'agit d'une région normalisée, c-à-d regroupant des secteurs de dénombrement (une circonscription électorale fédérale, une division de recensement, une subdivision de recensement, une subdivision de recensement, une subdivision de recensement, une subdivision de recensement, un secteur de recensement, etc.) ou d'une région non pormalisée

Tableau: Erreur type approximative provenant de l'échantillonnage des données-échantillon du recensement de 1986

| | Valeur des cases | | | | | | | | | | | |
|--------------------------------------|------------------|-----|-----|-----|-------|-------|-------|--------|--------|--------|---------|---------|
| Erreur type approxi- mative | 50 | 100 | 200 | 500 | 1,000 | 2,000 | 5,000 | 10,000 | 20,000 | 50,000 | 100,000 | 500,000 |
| | 15 | 20 | 30 | 45 | 65 | 90 | 140 | 200 | 280 | 435 | 600 | 1,300 |

93-153

pour laquelle l'utilisateur désire une totalisation spéciale Les données sont supprimées si la population est inférieure à 40 personnes dans le cas des régions normalisées, et à 100 personnes lorsqu'il s'agit de régions non normalisées. Pour les tableaux renfermant des répartitions des revenus. on supprime aussi les données relatives aux régions dont la population est inférieure à 250 personnes. Toutefois, les données supprimées sont incluses dans les totaux, partiels ou non, à un niveau d'agrégation supérieur. Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les produits sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données recueillies sur un échantillon de 20%.

Nota: Pour les données-échantillon, la suppression des régions est fondée sur la population hors institution plutôt que sur la population totale, étant donné qu'aucune donnée-échantillon n'a été recueillie pour la population des institutions.

Dans le cas de la suppression des cases, il faut préciser une valeur minimale acceptable. Toutes les cases dont la valeur est inférieure au seuil établi sont supprimées et remplacées par le symbole (XXX). Les données supprimées sont toutefois incluses dans les totaux, partiels ou non, à un niveau d'agrégation supérieur. Pour les données de 1986, on a mis en oeuvre deux méthodes différentes de suppression des cases. Dans le cas des publications de la série "Le Pays" et de la série "Dimensions" portant sur le revenu, la profession précise ou l'industrie précise, on supprime la répartition lorsqu'il s'agit de moins de 250 personnes ou unités. Dans le cas de totalisations personnalisées ou semi-personnalisées se rapportant à des variables recueillies à partir d'un échantillon, toutes les cases dont la valeur est de "5" (après arrondissement aléatoire) sont supprimées.

NOTES SPÉCIALES

CHIFFRES DE POPULATION BASÉS SUR LA RÉSIDENCE HABITUELLE

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada. Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

RÉSERVES INDIENNES ET ÉTABLISSE-MENTS INDIENS PARTIELLEMENT DÉNOMBRÉS

Lors du recensement de 1986, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a dû être interrompu parce qu'on ne pouvait le mener à terme.

Les données de 1986 ne sont donc pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (par ex., des variations en pourcentage) entre 1981 et 1986 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Bien qu'il soit impossible d'estimer la population de chaque réserve partiellement dénombrée, les estimations de la population totale manquante et du nombre total de logements privés occupés au niveau provincial ont été faites et sont présentées à l'annexe.

Pour de plus amples renseignements sur ce sujet, reportez-vous au Bulletin d'information à l'intention des utilisateurs, numéro 1, "Sommaire de la méthode utilisée pour l'estimation de la population et du nombre de logements privés occupés dans les réserves indiennes où le dénombrement a été incomplet".

Veuillez noter par contre qu'il a été impossible d'estimer les caractéristiques de la population manquante, même au niveau provincial.

93-153

COMPARABILITÉ ET QUALITÉ DES DONNÉES LINGUISTIQUES

Comparaison entre 1981 et 1986

Langue maternelle et langue parlée à la maison. Les mêmes questions linguistiques ont été posées lors des deux derniers recensements mais pour celles sur la langue maternelle et la langue parlée à la maison, les instructions données aux répondants ont été modifiées. En 1981, les répondants étaient invités à n'indiquer qu'une langue maternelle et qu'une langue parlée à la maison. Malgré cela, 597,980 personnes (2.5% de la population) avaient déclaré plus d'une langue maternelle et 535,735 personnes (2.2% de la population) avaient déclaré plus d'une langue parlée à la maison.

Afin de mieux rendre compte de la réalité linguistique au Canada, ces instructions ont été supprimées du recensement de 1986. En vertu des nouvelles instructions données aux répondants, une personne pouvait indiquer deux langues maternelles si elle les avait apprises simultanément et les aveit parlées aussi souvent l'une que l'autre dans son enfance. De même, une personne pouvait indiquer plus d'une langue parlée à la maison si elle les utilisait actuellement aussi souvent l'une que l'autre à la maison.

Le nombre de réponses multiples s'est accru de manière importante lors du recensement de 1986 par rapport à celui de 1981. En 1986, 954,940 personnes (3.8% de la population) ont fourni une réponse multiple à la question sur la langue maternelle et 1,159,675 personnes (4.6% de la population) ont indiqué parler plus d'une langue à la maison.

Cette augmentation résulte soit des modifications apportées au questionnaire, soit des changements dans la manière dont la population répond aux questions linguistiques, soit d'un accroissement du nombre de personnes ayant appris plus d'une langue maternelle ou du nombre de personnes parlant plus d'une langue à la maison. L'augmentation des réponses multiples peut aussi résulter d'une combinaison de ces facteurs.

Lors du traitement des données de 1981, on n'a retenu et publié qu'une seule langue, même dans les cas où plusieurs avaient été déclarées. En 1986, on a accepté les réponses comprenant plus d'une langue.

Pour faciliter l'établissement des tendances entre les deux recensements, les données du recensement

de 1986 ont été ajustées. Dans les cas où plus d'une langue a été indiquée, les réponses multiples ont été réparties entre les langues composantes dans les mêmes proportions qu'au recensement de 1981. Les résultats ont été publiés dans un document spécial intitulé "Données linguistiques aiustées", avril (1988). De plus, les données du recensement de 1981 ont été ajustées pour faire état des réponses multiples alors obtenues. Les données sont présentées dans le tableau 4 des publications 93-102 (langue maternelle) et 93-103 (langue parlée à la maison). Ces ajustements aux chiffres de la langue maternelle et de la langue parlée à la maison facilitent la mise en relation des données de 1986 avec celles de 1981, mais ne rendent pas parfaitement comparables les résultats des deux recensements. Par conséquent. il faut être très prudents dans l'interprétation des changements observés entre 1981 et 1986.

Des modifications ont été apportées à la classification des langues de 1986 par rapport à celles de 1981, notamment en ce qui concerne les langues autochtones. L'annexe B du Dictionnaire du recensement de 1986 (n° 99-101F au catalogue) nous donne une description des changements.

Langue officielle. Certains répondants ont déclaré parler l'anglais ou le français ou les deux à la maison alors qu'ils ont indiqué, à la question sur la langue officielle, ne pas pouvoir soutenir une conversation dans ces deux langues.

Dans de tels cas, au recensement de 1981, la réponse à la question sur la langue officielle était considérée comme étant erronée. Par conséquent, au cours du traitement des données, cette réponse était modifiée afin de montrer que la personne pouvait parler la (les) langue(s) officielle(s) qu'elle avait déclarée(s) à la question sur la langue parlée à la maison

Au recensement de 1986, ces réponses n'ont pas toujours été considérées comme étant erronées. Si le répondant avait indiqué pouvoir parler une seule des langues officielles, soit l'anglais ou le français, et que cette langue correspondait à la langue maternelle de cette personne, aucune correction n'a été apportée lors du traitement. Par conséquent, ces enchaînements de réponses apparaissent tels quels dans les totalisations de 1986.

Pour de plus amples renseignements au sujet des données linguistiques, veuillez communiquer avec la Division des statistiques sociales, du logement et des familles, Statistique Canada, Ottawa, Canada K1AOT6.

OÙ NOUS TROUVER?

Les centres régionaux de consultation de Statistique Canada offrent la gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter des publications du recensement, des disquettes de micro-ordinateurs, des microfiches, des cartes et plus encore. Chaque centre vous offre la possibilité d'extraire de l'information des systèmes de retrait de données automatisées CANSIM et TELICHART de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les clients se trouvant à l'extérieur des services d'appel locaux. On y offre également plusieurs autres services utiles, allant des séminaires aux consultations. Pour obtenir des renseignements, téléphonez ou écrivez au centre de consultation de votre région. Pour une description concise des produits et services du recensement de 1986, se reporter à la section "Lignes directrices pour l'utilisation de cette publication".

de données du recensement

Decisions Décisions

ECISION DATA: The 1986 Census Data Base provides the definitive picture of Canada today and a Focus for the Future. Census products offer researchers, policy analysts and other decision makers maximum flexibility using a core data base together with a range of customized products: vital keys to quality research and good planning.

A corporation is scouting Canada for places to sell summer and winter sporting goods. Seeking target markets that conform to its client profiles, this company will need to look at incomes, occupation, age groups and even family structure to find the best locations. The Census Customized Service designed a package to meet the criteria

 A community association was asked to advise the municipal parks committee on the recreation plan for their area. Using census data on family formation, size and standard of living, the association concluded that a children's play area would be under used by the mostly older, working population. They proposed revenue-generating sports facilities be built instead.

ONNÉES DÉCISIVES: La base de données du recensement de 1986 permet de brosser un portrait définitif du Canada d'aujourd'hui et de faire voile vers l'avenir. Les produits du recensement offrent aux recherchistes, aux analystes des politiques et à d'autres décideurs un maximum de souplesse, et ce grâce à la base de données et à un éventail de produits personnalisés, secrets d'une recherche de qualité et d'une bonne planification.

Une compagnie parcourt le Canada à la recherche de points de vente d'équipement sportif d'été et d'hiver. Pour déterminer les marchés cibles répondant au profil de sa clientèle, bref, les meilleurs emplacements, cette compagnie devra passer en revue les données sur le revenu, la profession, les groupes d'âges et même la composition des familles. Le Service personnalisé du recensement répond précisément à ces

Une association communautaire devait conseiller le comité municipal des parcs sur le plan de récréation de leur région. En utilisant les données du recensement sur la formation et la taille des familles ainsi que sur le niveau de vie, l'association devait conclure qu'une aire de ieux pour les enfants serait sous-utilisée par la plupart des travailleurs et personnes plus âgées. L'association a donc proposé à la place la création d'installations sportives à but
